Chapter 1

README

Ši programa leidžia:

Įvesti studentų duomenis rankiniu būdu, automatiškai arba iš failo Apskaičiuoti galutinį pažymių rezultatą pagal vidurkį arba medianą Skirstyti studentus į dvi grupes: pažangius ir nepažangius pagal dvi strategijas Rezultatus išvesti į ekraną arba į failus alfos.txt ir susmukeliai.txt Rūšiuoti studentus pagal vardą, pavardę arba galutinį rezultatą

Programa naudoja dvi klases. Bazinę Žmogaus klasę, kuri aprašo bendrus žmogaus atributus (vardas, pavardė). Turi gryną virtualią funkciją test(), todėl iš jos negalima kurti objektų. Ir klasę Studentas, kuri yra paveldima iš Žmogaus klasės. Joje saugomi Studento pažymiai ir galutinis rezultatas. Implementuoja test() metodą, galima kurti Studento tipo objektus.

Perdengtų metodų paaiškinimas

----- Įvesties būdai -----

Tipas	Realizacija	Aprašymas
Rankinis	pasirinkimas == 1	Vartotojas suveda vardą, pavardę, ND ir egzaminą
Pusiau auto	pasirinkimas == 2	Automatiškai generuojami tik pažymiai
Automatinis	pasirinkimas == 3	Visi duomenys sugeneruojami automatiškai
Iš failo	failo pasirinkimas == 1,2,3,4,5	Visi duomenys sugeneruojami kursiokai.txt faile

----- Išvesties būdai -----

Tipas	Realizacija	Failai
Ekranas	pasirinkimas == 1, spausdinam()	Duomenys išvedami į ekraną pagal rikiavimą
Į failą	pasirinkimas == 2, spausdinam()	Sukuriami alfos.txt ir susmukeliai.txt

==== REZULTATŲ LENTELĖ ====

Veiksmas	V1.0 (1M)	V1.1 (1M)	V1.0 (10M)	V1.1 (10M)

Chapter 2

Hierarchical Index

2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

Zmogus	10
Student	9

Chapter 3

Class Index

3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

Student		9
Zmogus		10

Chapter 4

File Index

4.1 File List

Here is a list of all documented files with brief descriptions:

lib.h	11
V1.5vect.h	11

Chapter 5

Class Documentation

5.1 Student Class Reference

Inheritance diagram for Student:

Public Member Functions

- void **test** ()
- **Student** (const **Student** &other)
- **Student** & **operator=** (const **Student** &other)
- **Student** (**Student** &&other)
- **Student** & **operator=** (**Student** &&other)
- void **setVid** (double Vid)
- void **setEgz** (int Egz)
- void **setNd** (vector< int > &Nd)
- double **getVid** () const
- int **getEgz** () const
- vector< int > & **getNd** ()

Public Member Functions inherited from **Zmogus**

- void **setName** (string &Name)
- void **setSurn** (string &Surn)
- string **getName** () const
- string **getSurn** () const

Friends

- istream & **operator>>** (std::istream &in, **Student** &s)
- ostream & **operator<<** (ostream &os, const **Student** &s)

Additional Inherited Members

Protected Attributes inherited from [Zmogus](#)

- string **name**
- string **surn**

5.1.1 Member Function Documentation

5.1.1.1 test()

```
void Student::test () [inline], [virtual]
```

Implements [Zmogus](#).

The documentation for this class was generated from the following file:

- V1.5vect.h

5.2 Zmogus Class Reference

Inheritance diagram for Zmogus:

Public Member Functions

- void **setName** (string &Name)
- void **setSurn** (string &Surn)
- string **getName** () const
- string **getSurn** () const
- virtual void **test** ()=0

Protected Attributes

- string **name**
- string **surn**

The documentation for this class was generated from the following file:

- V1.5vect.h
